

RED BANNER ALERT

SHW Serious Incident (SI) – Preliminary Notice

Date of Incident:	09/08/2023	Time of Incident:	8.00am
Directorate / Region:	RMO - Wheatbelt	Main Roads or Contractor:	Contractor
EQSafe Event Type:	Injury/ Illness	EQSafe Incident Number:	33206
Actual Consequence:	Moderate	Potential Consequence:	Moderate

Incident Short Description:	Manual Handling Back Injury, Resulting in LTI
------------------------------------	---

What Happened:
At approximately 8.00 on Tuesday 8th August, a Contractor (IP) was engaged to carry out pavement investigation works which involved varying levels of manual handling activities including shovelling, use of small plant and equipment and lifting and carrying loads a short distance. Whilst carrying out the pavement investigation works, the IP has felt pain in their back. The IP has ceased work and reported to the MRWA Supervisor, stating that they had also had a pre-existing injury to the lumbar area. The IP has then notified their Employer and was taken to the regional medical centre where it was confirmed that they had sustained a minor muscular injury in the lumbar region. The IP was deemed medically unfit for work for 11 days, resulting in an LTI. A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.
Immediate Actions:
<i>Please note that these are generic actions for all to consider in relation to this critical risk (and is not reflective of this specific incident):</i> - Ensure that Workers have been trained in correct manual handling techniques. - Ensure that Workers are Fit for Work. - Conduct a risk assessment to determine where mechanical lifting devices are required and where manual handling risks can be reduced/eliminated

Distribution of Notice:	Main Roads Personnel and Contracting Organisations
