SHW Serious Incident (SI) – Preliminary Notice

Date of Incident	19/03/2024	Time of Incident	1:30pm
Directorate / Region	RMO – Wheatbelt	Main Roads or Contractor	Contractor (TM Panel)
EQSafe Event Type	Injury / Illness	EQSafe Incident Number	38883
Actual Consequence	Moderate	Potential Consequence	Moderate

Incident Short Description	Traffic Controller (TC) injures back collecting traffic cones, resulting in LTI
-----------------------------------	---

What Happened
Whilst workers were conducting minor repair works on Albany Highway under a reversible flow traffic management setup, the Maintenance Crew were called to respond to an external emergency callout. The Crew left the site to attend to the emergency callout, which left two Traffic Controllers on site to pack up the traffic management devices, which included 1km of traffic cones. After packing up approximately 500m of the cones, one of the Traffic Controllers (Injured Person – IP) was bending over to pick up a stack of four cones, when the IP felt a pain in their lower back. The IP reported the incident to their colleague and finished packing up the traffic management devices. No incident report was provided at the time of occurrence. Upon arrival to the Narrogin depot on Wednesday 20th March, the IP notified the Main Roads Supervisor of their injury. The IP was then stood down, a statement of events was taken, and the IP then notified their Employer. A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/through a final Grey Banner Alert as soon as practicable.
