WESTERN AUSTRALIA

SHW Serious Incident (SI) – Preliminary Notice

Date of Incident	10 April 2024	Time of Incident	10:29am
Directorate / Region	PIL – Pilbara Region	Main Roads or Contractor	Contractor
EQSafe Event Type	Injury/ Illness	EQSafe Incident Number	39646
Actual Consequence	Moderate	Potential Consequence	Moderate

Incident Short Description	Worker sustains back injury whilst replacing guide post
-----------------------------------	---

What Happened
On Wednesday 10th April, a worker was removing a guidepost on a highway when they felt a pop in their lower back. They experienced pain in their lower back and groin area. A coworker drove the IP to the nearest health campus. On presentation, the IP was assessed by a treating physician and then travelled to Perth for further treatment. The IP was assessed by a doctor who confirmed they had no capacity for work until 16th April 2024 and referred them for physiotherapy treatment. A formal investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.
