isafe Event Type	Injury / Illness	isafe Incident Number	INC-0000351
Actual Consequence	Moderate	Potential Consequence	Moderate
Reportable to WorkSafe	Yes	Type of Notifiable Incident	Serious injury or illness that a medical practitioner considers likely to prevent normal work for at least 10 days

Incident Short Description	Road worker experienced lower back pain, resulting in LTI
-----------------------------------	---

What Happened

At approximately 7:20 am on 26 June, a Maintenance Road Worker (IP) was assisting another worker to retrieve traffic signs from the sign shed for the day's work. While closing the shed door, the door contacted the ground and would not close properly due to worn hinges causing the door to drop. The IP attempted to lift the door to clear the obstruction and return it to its correct position. While lifting the door, IP experienced a sudden onset of pain in the centre of their lower back, causing immediate discomfort.

***Signs Shed Door Hinge***

The IP reported the back pain to their supervisor and was taken to the nursing post for assessment. A follow-up appointment with a doctor in a nearby town resulted in the injury being classified as an LTI. Signage has been placed on the door advising it is not to be opened or closed, and repairs to the door hinges have been arranged.

A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated through a Grey Banner Alert as soon as practicable.
