

RED BANNER ALERT**Serious Incident – Preliminary Notice****CRITICAL RISK: N/A**

Date of Incident	31/07/2026	Time of Incident	12:15pm
Directorate / Region	South West Region	Main Roads or Contractor	Main Roads
isafe Event Type	Injury / Illness	isafe Incident Number	INC-0000498
Actual Consequence	Moderate	Potential Consequence	Moderate
Reportable to WorkSafe	Yes	Type of Notifiable Incident	Serious injury or illness that a medical practitioner considers likely to prevent normal work for at least 10 days

Incident Short Description	Worker has injured back moving roll of geotextile fabric
-----------------------------------	--

What Happened
At approximately 12:15pm on Friday the 31st of July 20026, a Main Roads employee (IP) was in the process of installing geo textile fabric in a benched-out section of the road when the roll became stuck against the embankment of the trench. The IP proceeded to pull the roll to move it and felt a twinge in the lower middle section of their back. The IP finished out the remainder of the day, feeling mild discomfort in his back, and reported the injury to his supervisor. The back injury worsened over the weekend period. The IP returned to work on Monday and completed the day, however, the pain had not improved. On Tuesday, he reported the continued pain and sought medical assessment. IP attended a GP later that day and was initially placed on restricted duties. A subsequent follow up assessment on Tuesday 11th of August following scans has determined the worker unfit for work for 2 weeks, resulting in a Lost Time Injury (LTI). A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated through a Grey Banner Alert as soon as practicable.

Distribution of Notice	Main Roads Personnel and Contracting Organisations
