SHW Serious Incident (SI) – Preliminary Notice

Date of Incident	12 June 2026	Time of Incident	1330 Hrs
Directorate / Region	South West Region	Main Roads or Contractor	Main Roads
isafe Event Type	Injury	isafe Incident Number	INC-0304
Actual Consequence	Moderate	Potential Consequence	Low

Incident Short Description	Plant operator contacted submerged rock, resulting in LTI
-----------------------------------	---

What Happened

On Friday 12th June, the plant operator (IP) was undertaking shoulder grading works using a Multi Terrain Loader (MTL) fitted with a grader attachment. While grading the second side of the road, the grader attachment made contact with a submerged granite rock that was not visible from the surface.

The impact was significant, resulting in the MTL lifting off the ground. The sudden force of the impact caused the IP to be thrown forward within the cab. Although they were wearing a seatbelt and the safety restraint bar was engaged, the force of the impact caused their hat and safety glasses to be dislodged. The IP described the impact as a very hard hit and is uncertain whether their head made contact with the cab door during the incident.

Following the impact, the IP stopped work momentarily and assessed their condition. The IP reported feeling shaken and experiencing some soreness but believed they were fit to continue. The IP resumed work and completed the remainder of the day's tasks. Later, after developing a headache, they took Panadol and continued to monitor their condition, believing the symptoms would subside.

The incident was subsequently reported when symptoms persisted 4 days post incident. The IP attended a doctor for review and was diagnosed with a mild concussion and was deemed unfit for duties for 7 days, resulting in an LTI.

A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.
