Directorate / Region	Southwest Region	Main Roads or Contractor	Main Roads
isafe Event Type	Injury / Illness	isafe Incident Number	INC-0338
Actual Consequence	Moderate	Potential Consequence	Moderate

Incident Short Description	Road worker experienced back pain while descending emulsion tank access ladder, resulting in an LTI
-----------------------------------	---

What Happened

After filling the emulsion truck tank with emulsion, a Road Worker (IP) experienced a twinge in their lower back while descending the access ladder. They immediately ceased work and notified their supervisor. The IP attempted to book a medical appointment for that afternoon; however, the first available appointment was the following morning.

The following morning, the IP awoke with significant back pain and was unable to attend work. The IP attended the medical appointment where they were assessed as having no capacity for work for 7 days, resulting in an LTI.

*Emulsion Tank Access Ladder*

A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.
