Reportable to WorkSafe	No	Type of Notifiable Incident	N/A

Incident Short Description	Worker injured ankle whilst moving steel rebar, resulting in LTI
-----------------------------------	--

What Happened
At approximately 11:30 AM whilst moving steel rebar, a Contractor (Injured Person – IP) has felt a painful sensation in their right ankle. The IP has ceased work and driven to the project camp for the scheduled lunch break. During the break, the right ankle has started to swell, and the IP was unable to walk on it properly. The Project team were advised of the injury, and the IP was taken to the nearest hospital for assessment. The treating doctor has advised a scan of the injury may be required and has certified the IP unfit for work for 1.5 days, resulting in an LTI. The IP is not on their rostered week off and will return to a doctor for a medical assessment later this week to determine whether they are fit to return to the project site for the next swing commencing Tuesday 14th July. A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated through a Grey Banner Alert as soon as practicable.
