Directorate / Region	RMO – Mid West Gascoyne	Main Roads or Contractor	Main Roads
EQSafe Event Type	Damage / Loss	EQSafe Incident Number	39356
Actual Consequence	Minor	Potential Consequence	Catastrophic

Incident Short Description	Maintenance truck tyre blowout resulting in crash
-----------------------------------	---

What Happened

At approximately 10.00am on Tuesday 2nd April, the Heavy Maintenance Crew were travelling in convoy east on Geraldton-Mount Magnet Road.

Approximately an hour and a half into the journey, a 6-tonne maintenance truck towing a trailer suffered a passenger steer tyre blowout, causing the truck to pull uncontrollably to the left and leave the road.

The truck travelled into roadside scrub and came to a stop 10 metres off the road. The driver and passenger were shaken but unharmed, however the truck is likely to be irreparable.

Cones were deployed along the roadside and a speed restriction implemented. The driver then phoned their manager to report the incident.

The Regional Safety Manager attended the incident scene to commence investigation, and an initial WAPOL notification was made.

The trailer was recovered, inspected and removed from site, and a tow truck engaged to recover the maintenance truck.

A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.

This serious potential incident aligns with the Main Roads Critical Risk profile relating to
Mobile Plant
