SHW Serious Incident (SI) – Preliminary Notice

Date of Incident	23/03/2026	Time of Incident	11:00 AM
Directorate / Region	RMO Metropolitan	Main Roads or Contractor	Main Roads
EQSafe Event Type	Injury/Illness	EQSafe Incident Number	57536
Actual Consequence	Moderate	Potential Consequence	Moderate

Incident Short Description	Worker receives finger laceration during sign installation
-----------------------------------	--

What Happened

On 23rd March 2026 at approximately 11:00 AM, the injured person (IP) was performing a routine sign replacement task on a Size C sign panel in Serpentine. The IP removed the top bolt first, causing the sign to swing downward on the lower bolt. As it swung, the IP attempted to catch it, resulting in their hand being struck and pinched between the sign and the post. This caused a deep laceration to the middle finger.

First aid was administered immediately at the scene, and the IP was then transferred to hospital for assessment and medical treatment. This injury resulted in a Lost Time Injury (LTI).

A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.
