

Item (Generic / Site Specific)		Risk Event	Consequence	Pre-treatment Risk			Treatment	Residual Risk		
				L	C	RR		L	C	RR
3.2. 1	3 G	Proposed generic drawings do not provide a signs and devices list for Traffic Management Implementation causing incorrect/insufficient signs and devices on site resulting in an exposure to unnecessary risks.	Serious injury or fatality to workers or Traffic Control as a result of insufficient advanced warning of approaching hazards.	C	4	H12	The proposed Traffic Guidance Scheme and any further Traffic Management Advice shows all the required signs and devices necessary to implement the proposed setups. Traffic Management Personnel and/or workers must review the advice prior to leaving yard to ensure that all required signs and devices are included on vehicles. Where insufficient signs and devices are provided on site as a result of not reviewing the advice, the works may be cancelled and rescheduled for a later date or delayed until the necessary signs can be acquired.	D	4	M8
3.2. 2		Environmental Conditions and Impacts								
3.2. 2	1 G	Poor weather conditions on site decreasing visibility for road users to the proposed Traffic Management measures causing approaching vehicles to collide with worksite and/or workers resulting in serious injury or fatality.	Serious injury or fatality to workers and Traffic Control personnel in worksite.	C	4	H12	Traffic Management Assessor or Project Delivery Supervisor to determine an appropriate window of clear weather to execute the proposed works. Where signs and devices are implemented during poor weather conditions periodic site checks must be conducted to determine whether adjustments are required to enhance visibility. Placement of additional repeater signage or 'Slippery when wet' signage if required and sign spacing may be increased by 25%. Any additional signs or changes on site must be recorded within the daily diary.	D	4	M8
3.2. 2	2 G	Works conducted during night time hours causing poor visibility of Traffic Management Personnel and workers due to artificial illumination resulting in serious injury or fatality.	Serious injury or fatality to workers and Traffic Control personnel.	C	4	H12	Traffic Management Personnel must be adjacent to workers on site and vigilant at all times of approaching vehicles or hazards to the worksite. All Traffic Management Personnel and workers must wear high visibility clothing with retro-reflective strips to their vests/shirts and trousers. Traffic Management Personnel operating during night time hours must use a night wand to direct traffic.	D	4	M8
