

Should the need for additional (not shown on the Traffic Guidance Schemes) or reduced number of signs or devices be required due to unforeseen circumstances, they shall be recorded within the Daily Diary as a variation and following the required approvals.

Below is a list of the current approved drawings, sorted in alphabetical order. Each TGS has been assigned an implementation/selection requirement based on the complexity of the proposed TM. The below headings define each implementation/selection requirement in further detail:

7.1.1 Independent Works Crew

These drawings may be implemented by an Independent Works Crew and may not require additional Traffic Management Implementers. These scenarios may be selected by all other levels of qualification outlined in this Traffic Management Plan.

7.1.2 TMI with BWTM

These drawings may be implemented by dedicated Traffic Management Implementers with Basic Worksite Traffic Management Qualification. These scenarios may be selected and implemented by persons with Basic Worksite Traffic Management, Worksite Traffic Management and Advanced Worksite Traffic Management qualification but is not recommended for Individual Work Crews.

7.1.3 TMI with 3 Months Experience

These drawings may be implemented by Traffic Management Implementers with Basic Worksite Traffic Management Qualification and a minimum of 3 months working experiencing installing signs and devices. Due to the more complex nature of the setups, it is recommended for Traffic Management Implementers with on-site experience. Alternatively, the works may be implemented/selected by an individual with a Worksite Traffic Management or Advanced Worksite Traffic Management Qualification. These scenarios must not be implemented by an Independent Work Crew.

7.1.4 Additional Planning & Approvals

These drawings require additional stakeholder approval prior to implementation. Due to the complex nature of the setups, it is recommended that an individual with a Worksite Traffic Management or Advanced Worksite Traffic Management qualification oversee the selection of these drawings. These drawings should only be implemented by Traffic Management Implementers with on-site experience. Special consideration must be provided to the implementation and running of these proposed Traffic Management Setups.

7.1.5 Setup and Guidance Drawings

These drawings are to be used as a guide for the setup of different scenarios and should be read in conjunction with AGTTM implementation drawings.

Table 46: Setup and Guidance Drawing Register

Traffic Management Type	TGS Number
Taper Implementation – Cone Delineation	IW-001
Signage Implementation – Multiple Scenarios	IW-002
Chicane Implementation – Cone Delineation (1/2)	IW-003
Chicane Implementation – Cone Delineation (2/2)	IW-004
Signage Implementation – Multilane Road	IW-005
Signage Implementation – Control of Access Environments	IW-006
Opposing Traffic Within 1.2m – Taper Setup	IW-007
