

- c) Where innovative treatments (see Clause 1.5) that are outside the scope of the Queensland MUTCD are proposed to be adopted in a TMP or TGS, a risk assessment, in accordance with the QGTTM, shall be undertaken by a Competent Person **with at least TMD competency**. Both the risk assessment and the TMP **and/or TGS shall be certified by an RPEQ who may be required to hold TMD competency**. The RPEQ is only required to certify that portion of the TMP **and/or TGS design impacted by or related to the use of the innovative treatment which is outside the scope of the Queensland MUTCD**.

All proposed innovative treatments require approval by Transport and Main Roads prior to their use or adoption. Requests for approval of innovative treatments (including all relevant information) shall be emailed to TrafficEngineering.Support@tmr.qld.gov.au. As part of an approval to use or trial an innovative treatment, Transport and Main Roads may require that the applicant provides a detailed evaluation report on the performance and effectiveness of the treatment. Transport and Main Roads may use the results of the evaluation to identify potential future practice changes to this Part of the *Manual*.

- d) The use of options (*may*), when adopted in preparing a TMP or TGS, are not a variation to the optimal treatment and do not require certification by an RPEQ.

Very few roadworks sites should fall within scope of the RPEQ requirement in **addition relation** to subclauses (b) and (c). Examples include TMPs or TGSs which involve complex geometric changes that require the application of engineering design principles or complex diversions that might require detailed analysis (such as micro-simulation traffic modelling) to establish the network impacts.

Risk assessments for TTM activities shall be prepared in accordance with the requirements in QGTTM Part 10 Section 2 *Risk Management for TTM*.
