

5. ## The load restriction area must be terminated with a GROSS LOAD LIMIT sign (R6-4) showing the appropriate weight, combined with an END sign (R7-4) or the multi message frame as shown.
6. Regional staff should liaise with Transport Enforcement Officers and Queensland Police Service on sign locations prior to installation.
7. Load Limit signs should also be installed on the approach to all intersecting roads.

Figure A.6.3 – Example sign layout for a typical route with various restrictions and a closure due to flooding

Notes:

1. Sign TC1802 is not enforceable but may be used as an advance sign indicating a road restriction ahead.
2. The actual point of the closure or restriction must also be signed, and it is this signage that enables enforcement to occur.
3. TC1774 or TC1709 or similar route signs are not enforceable and are advisory traveller information signs used to indicate road restrictions on various sections of the route ahead.
