WESTERN AUSTRALIA**SHW Serious Incident (SI) – Preliminary Notice**

Date of Incident	16 February 2024	Time of Incident	Approx. 12:30
Directorate / Region	MET – Metropolitan	Main Roads or Contractor	Main Roads
EQSafe Event Type	Injury/Illness	EQSafe Incident Number	38162
Actual Consequence	Moderate	Potential Consequence	Moderate

Incident Short Description	Maintenance worker suffers shoulder injury, resulting in LTI
-----------------------------------	--

What Happened

After conducting routine maintenance works throughout the morning, the Injured Person (IP) has gone to exit the maintenance truck. Using the grab rail to assist in exiting, the IP has proceeded to exit and has twisted their shoulder whilst they have stepped down from the cab to the ground.

The IP has advised another maintenance worker of the pain, and they have then swapped as drivers so that IP could rest the shoulder and have then continued on with maintenance works as normal.

At end of shift, the Crew Leader was informed of the incident and the IP has purchased anti-inflammatory tablets from the local pharmacy to treat the pain.

On Monday 19 February, the IP has booked an appointment with their local GP for medical assessment, who has then confirmed that x-rays and an ultrasound would be required.

On Tuesday 20 February, the IP has been deemed medically unfit for work by their GP until 8 March.

A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.

This serious potential incident aligns with the Main Roads Critical Risk profile relating to
Vehicles and Driving
