Directorate / Region	MET – Metropolitan Region	Main Roads or Contractor	Main Roads
EQSafe Event Type	Injury / Illness	EQSafe Incident Number	37835
Actual Consequence	Moderate	Potential Consequence	Moderate

Incident Short Description	Lower back strain accessing TMA, resulting in LTI
-----------------------------------	---

What Happened

On Wednesday 14 February at approximately 00:30, a Maintenance Worker IP (Injured Person) was refuelling the TMA truck towards the end of the night shift at a Coles Express service station on Bannister Rd, Canning Vale.

After refuelling, the IP has gone to get back into the truck, pulling themselves up with both hands and with one foot on the bottom step. At this point, they have felt a strong pain in the lower left side of their back.

The IP has managed to get into the TMA cab and fasten their seat belt, noting that pain was then felt below the left shoulder blade and towards the spine.

The IP has then continued back to the depot to complete their night shift and has notified their supervisor of the incident.

The IP visited their doctor later that afternoon who diagnosed a pulled muscle, and provided a Medical Certificate advising that the IP was unfit for work for the following shift on Thursday 15 February, resulting in an LTI.

A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.

This serious potential incident aligns with the Main Roads Critical Risk profile relating to
Vehicles and Driving
