SHW Serious Incident (SI) – Preliminary Notice

Date of Incident	21 May 2024	Time of Incident	09:15am
Directorate / Region	RMO – Pilbara	Main Roads or Contractor	Contractor
EQSafe Event Type	Near miss	EQSafe Incident Number	40545
Actual Consequence	Insignificant	Potential Consequence	Major

Incident Short Description	Worker observed working within 1.2m of live traffic
-----------------------------------	---

What Happened

On Tuesday 21 May 2024, core testing was scheduled to take place on a shoulder widening project near Newman. The worker was given clear instructions that work should not begin until the appropriate traffic management was in place to ensure the safety of the worker on the road.

At approximately 9:15am during a routine project site inspection, a worker was observed performing their first core sample and working within 1.2m of the live lane. This was being done without a spotter and the necessary traffic management setup.

The worker was immediately approached and informed that they were not allowed to work within 1.2m of the live lane without the proper traffic management measures in place. During this conversation, the traffic controller arrived and began setting up the traffic management as specified in the projects' Traffic Guidance Scheme.

A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.

This serious potential incident aligns with the Main Roads Critical Risk profile relating to
Interaction with Live Traffic
