

**RED BANNER ALERT****mainroads**
WESTERN AUSTRALIA**SHW Serious Incident (SI) – Preliminary Notice**

Date of Incident	24 May 2024	Time of Incident	2:44pm
Directorate / Region	RMO – Mid West Gascoyne	Main Roads or Contractor	Contractor
EQSafe Event Type	Damage / Loss	EQSafe Incident Number	40634
Actual Consequence	Minor	Potential Consequence	Major

Incident Short Description	Sub-contractor vehicle loses control on journey to site.
-----------------------------------	--

What Happened

At approximately 2:45pm, whilst enroute to a shoulder widening site, a sub-contractor has crossed the opposing lane and entered the road shoulder.

The vehicle has continued to travel down the fore-slop and along a flat area of road shoulder for around 125 metres. The vehicle has then hit a rutted area, causing the vehicle to roll over and land on the shoulder on its roof.

The crew travelling at the front of the convoy have observed that the rear vehicle was no longer there and have travelled back to see where the vehicle was.

The crew have observed the vehicle on its roof and the driver safely out of the vehicle.

Emergency Services were called and have arrived at the site to assess the driver. The driver was taken to a medical centre and was confirmed by a nurse to have no injuries.

However, following for-cause AOD testing, the driver and two of the other in the convoy have returned non-negative AOD test results.

A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.

This serious potential incident aligns with the Main Roads Critical Risk profile relating to
Vehicles and Driving
