EQSafe Event Type	Injury / Illness	EQSafe Incident Number	41002
Actual Consequence	Moderate	Potential Consequence	Major

Incident Short Description	Vehicle rollover on journey from site
-----------------------------------	---------------------------------------

What Happened

At approximately 4:00am on Friday 7 June 2024, a contracted Traffic Controller (Injured Person – IP) on their rostered day off was travelling on a highway when they lost control, crossed two lanes of traffic and rolled the vehicle on the verge.

The IP extracted themselves from the vehicle and made their way to the highway where two road trains stopped and arranged assistance.

The vehicle emergency system alerted WA police (WAPOL), who attended the incident site and performed alcohol and drug testing on the IP. Test results taken 2 hours after the initial incident showed that the IP blew 0.023.

The vehicle speed tracker also showed that vehicle had been travelling at 152km/hr at the time of the incident.

WAPOL called medics at a mine site, who deployed an ambulance to the incident location. The IP was then conveyed to the mine site and assessed by Paramedics, before being flown to Perth for further medical assessment and treatment.

The IP's injuries are still to be confirmed, however, it is suspected to have sustained a fractured shoulder, bruised or broken ribs and potential spinal injuries.

Tracks veering off into the scrub

Items from back of LV scattered near the crash site

LV rolled onto its side at crash site

This serious potential incident aligns with the Main Roads Critical Risk profile relating to
Vehicles and Driving
