

Item (Generic / Site Specific)				Risk Event	Consequence	Pre-treatment Risk			Treatment	Residual Risk		
						L	C	RR		L	C	RR
3.2.	12	8	G	Pedestrians approaching temporary traffic management and not expecting vehicles in non-designated lanes causing an increase in conflicts between pedestrians and vehicles resulting in serious injury or fatality.	Serious injury or fatality.	C	4	H12	Additional Traffic Control personnel may be provided at pedestrian facilities to render assistance to all vulnerable road users. 'Two way traffic - Look both ways' signs to be installed at pedestrian crossing locations in contra-flow arrangements. 'Pedestrian watch your step' signs should be used in all other scenarios.	D	4	M8
3.2. 13				Rail Level Crossing Impacts								
3.2.	13	1	G	Works occur at or near a rail corridor causing road users in Traffic Management setups to be exposed to unnecessary risks, like queuing across the rail corridor, resulting in serious injuries or fatality.	Serious injury or fatality to road users.	C	4	H12	Detailed traffic analysis to be undertaken prior to the implementation of any works to determine the potential queue lengths. Mitigating Traffic Management procedures may be required to prevent road users from queueing across the rail corridor. Traffic Controllers may need to hold traffic upstream, with the 'slow' side of the bat covered, in advance of the rail corridor as required. Relevant notification and approval must be provided to the Rail Infrastructure Manager and a rail flagman may be appointed. Traffic Controllers must be on hand at all times to assist traffic and must ensure they are not directing traffic in a way Contradictory to the rail level crossing. No delineation or signage is to be installed within the rail corridor. All personnel operating within the rail corridor must wear orange vests as per the safeworking rules on all rail networks.	D	4	M8
3.2.	13	2	G	Works in close proximity to rail way line and rail crossing causing unsafe environments for workers and Traffic Management Personnel resulting in serious injury or fatality.	Serious injury or fatality to Traffic Management Personnel or workers.	C	4	H12	Approval with Rail Authority prior to the implementation must be conducted prior to implementation. A Rail Safety Management Plan may be required as determined by the Rail Authority. An accredited flag person will be positioned on site with a two-way radio to warn workers of incoming trains. Workers shall vacate the worksite and all plant left clear to allow access for the train.	D	4	M8
