SHW Serious Incident (SI) – Final Notice

Date of Incident:	25/08/2022	Time of Incident:	0715
Region / Directorate:	Kimberley	Main Roads or Contractor:	Contractor
EQSafe Event Type:	Injury	EQSafe Incident Number:	28093
Actual Consequence:	Moderate	Potential Consequence:	Moderate

Incident Short Description:	Worker cut finger changing grader blade resulting in a LTI
------------------------------------	--

Executive Summary:

At 7:15am two workers were changing cutting edges on a grader. In the process of undoing the nuts, with a rattle gun, one of the loose bolts dropped and one of the workers pushed it up into place with his finger (glove on). The rattle gun was applied to the nut and the bolt has spun cutting the top of their third finger on their left hand.

The worker could not stop the wound from bleeding and drove himself to the local hospital. The finger was assessed, and wound dressed, the worker was deemed no capacity to work, resulting in a lost time injury (LTI).

Example photo of worker changing cutting edges on a grader

Contributing Factors:	
• The worker did not identify using his finger was a hazard • Although gloves worn by worker, they could not stop the nut moving when rattle gun applied • Glove failed to prevent the cut, the workers should have been using a hammer handle or socket extension to keep fingers clear. • There wasn't a contractor procedure or Safe Work Instruction SWI to follow.	
Corrective Actions:	
• Toolbox with workers covering the first aid process, Injury management procedure and accompanying worker to the hospital. • Meeting held with supervisors to discuss the process when taking the worker to medical practitioner and if the certificate has no capacity for work. • Contractor to implement Safe Work Instruction on how to complete the task	
Distribution of Notice:	Main Roads Personnel and Contracting Organisations
