SHW Serious Incident (SI) – Final Notice

Date of Incident:	4 th September 2022	Time of Incident:	12:00pm
Region / Directorate:	CNR, Wheatbelt	Main Roads or Contractor:	Contractor
EQSafe Event Type:	Near Miss	EQSafe Incident Number:	28208
Actual Consequence:	Insignificant	Potential Consequence:	Major

Incident Short Description:	Road Train fails to stop at Portable Traffic Control Device (PTCD)
------------------------------------	--

Executive Summary:

At approximately 12:00pm on Sunday 4th September 2022, a member of the public in a road train was travelling towards a contractor bridge works site, which was under reversible flow at 40kph and controlled by manually operated PTCD's at either end.

Observing the approaching road train, the traffic controller at the eastern end of the site attempted to contact the driver to instruct them to slow down and stop at the hold line. The driver of the road train failed to stop at the red signal and continued past the PTCD and into the live lane past the work area.

As the queue of traffic at the opposite end of the site had already been released, the vehicles had to take evasive action and entered the work lane to avoid a collision with the road train. There were no workers in the work lane at the time of the breach.

Details of the road train were taken by the traffic controllers however the incident was not reported to the bridge works contractor until the following day, Monday 5th September 2022 and to the local WA Police unit on Tuesday 6th September 2022.

Contributing Factors:

- Road train drivers disregard of road rules by proceeding through a red signal.
- TC failed to report a Near Miss to Contractor immediately, as per site requirements.

Corrective Actions:

- Toolbox talks to be conducted with workers and relevant stakeholders to highlight the importance of always staying vigilant when interacting with live traffic.
- Toolbox talks to reiterate the requirements of reporting near miss incidents, and public incidents of non-compliance, to management immediately.
- Site management to liaise with WA Police to potentially increase their presence on PTCO controlled sites.
- MRWA to liaise with transport companies and heavy haulage contractors regarding adherence to traffic control signage and road rules.

Additional Issues/Learnings:

- Current protocols allow works vehicles to enter and leave works sites through the red signal, which potentially contributed to confusing the road train driver who then passed through same signal.

Critical Risk:

This serious potential incident aligns with the Main Roads Critical Risk Profile relating to **Interaction with Live Traffic.**
