Actual Consequence	Minor	Potential Consequence	Major
Reportable to WorkSafe	No	Type of Notifiable Incident	N/A

Incident Short Description	Truck and Trailer Rolled Over During Fill Import
-----------------------------------	--

Executive Summary

During unloading operations on level, stable ground, a spotter identified that a tipper trailer load was unevenly distributed and instructed the driver to lower the trailer bin. While lowering the bin, the trailer overturned onto its side, causing the truck cab to roll onto the driver's side.

The driver safely exited the vehicle through the passenger door and was uninjured. Key personnel responded immediately, provided support to the driver, and secured the area. Import fill deliveries were suspended, and the truck and trailer were subsequently recovered with only minor damage.

Front View: Truck

Contributing Factors

The investigation found the trailer was unevenly loaded before arriving on site, creating instability during unloading. Driver load inspections and available load inspection platforms were not consistently used to identify the issue before travel. When the load imbalance was identified during tipping, the delay between the spotter's instruction and the driver's response reduced the opportunity to prevent the rollover.

The incident was further influenced by challenges in truck scheduling and load management, including unauthorised additional trucks entering loading queues, reducing the ability of quarry personnel to effectively monitor load quality and truck movements.

Corrective Actions

- Ensure trailers are loaded evenly before leaving the quarry.
- Reinforce driver responsibilities to inspect and report load concerns.
- Communicate lessons learned and encourage reporting of safety concerns.
- Manage and track truck movements to maintain safe workloads.
- Restrict unauthorised subcontractor truck attendances.
- Reinforce requirements for spotting, communication and compliance with site instructions.
- Improve delivery scheduling and visibility of transport movements.
