Directorate / Region	MWG RMO	Main Roads or Contractor	Contractor
EQSafe Event Type	Near Miss - Injury	EQSafe Incident Number	35197
Actual Consequence	Insignificant	Potential Consequence	Major

Incident Short Description	Member of Public runs red light, resulting in Traffic Controllers foot being run over
-----------------------------------	---

What Happened

On Tuesday 7 November at approximately 1300 a Traffic Controller (TC) was manning the southbound stop light and had released traffic to the northbound control point. The TC has placed the traffic on stop as the last vehicle had left the queue and was travelling towards the northbound control point. Shortly after, a Member of Public (MoP) vehicle has come around the bend, approaching the stop point which was on hold. Instead of stopping at the designated stop location, the MoP has carried through the red lights. Upon realising this, the MoP has come to a halt 10 metres past the stop location.

At this point, the last vehicle has been received by the northbound control point, so the TC has instructed the MoP to reverse back to the designated stop location.

The TC has instructed the MoP to stop to avoid colliding with the traffic light and has stepped out slightly to gain the attention of the MoP, resulting in the TC's foot being run over the vehicle.

The incident was not immediately reported to site supervision and management were only made aware of the incident two days later.

The TC was approached about the incident where it was communicated no injury was sustained.

A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.

This serious potential incident aligns with the Main Roads Critical Risk profile relating to
Interaction With Live Traffic
