SHW Serious Incident (SI) – Preliminary Notice

Date of Incident	7 December 2023	Time of Incident	1130
Directorate / Region	Metropolitan	Main Roads or Contractor	Contractor
EQSafe Event Type	Injury	EQSafe Incident Number	36069
Actual Consequence	Moderate	Potential Consequence	Moderate

Incident Short Description	Traffic Controller trips over median, injuring chest and resulting in LTI
-----------------------------------	---

What Happened

On Thursday 7 December at approximately 1130, maintenance crews were conducting roadside vegetation maintenance, with a contractor providing traffic management, on Southwestern Highway in Bedfordale. The vegetation maintenance crew was taking place on the centre island of a dual lane, dual carriageway road.

A Main Roads worker has been moving a works vehicle closer to the work site, and on approaching the site has noticed a contracted Traffic Controller (Injured Person – IP) on the ground on their hands and knees.

The IP informed the worker that they had tripped over on an uneven dirt surface and fallen face forwards onto the centre median. The crew then assisted the IP to their work vehicle and have contacted the Crew Leader.

The Crew Leader has called for an ambulance due to the severity of the IP's pain, which has then transported the IP to the nearest hospital. Upon assessment, x-rays have revealed fracture of the right ribs and the IP has been deemed not fit for work for a period of two weeks.

WorkSafe have been notified and Lite ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.
