

**RED BANNER ALERT****mainroads**
WESTERN AUSTRALIA**SHW Serious Incident (SI) – Preliminary Notice**

Date of Incident	18 December 2023	Time of Incident	1200
Directorate / Region	RMO – Wheatbelt	Main Roads or Contractor	Contractor
EQSafe Event Type	Near Miss / Injury	EQSafe Incident Number	36332
Actual Consequence	Insignificant	Potential Consequence	Catastrophic

Incident Short Description	MoP vehicle travelled through operational worksite at high speed
-----------------------------------	--

What Happened

At approximately 1200 on Monday 18 December, a Contractor was conducting bitumen spray seal activities in the southbound lane on Great Northern Highway.

A member of public (MoP) travelling southbound has approached the site and when they have reached the queue of traffic located at the Portable Traffic Control Devices (PTCD) hold point, the MoP has moved into the opposite lane and continued around the stationary vehicles.

After the MoP has passed the queue of traffic, they have then moved into the work lane where they were observed to be travelling at excessive speed. The Site Supervisor has then communicated the emergency breach over the 2-way radio to all personnel on site.

As the MoP has reached the rollers operating in the work lane, they have used the road shoulder to overtake the rollers, have then proceeded through the work site, eventually exiting the work lane and continuing out of site.

A toolbox meeting was held the following morning to discuss the incident and to implement further controls. Review of work vehicle dashcam footage is also underway to determine whether the vehicle can be identified and reported to Police.

A formal ICAM investigation has commenced. Once completed, the lessons learnt will be communicated/shared through a final Grey Banner Alert as soon as practicable.

This serious potential incident aligns with the Main Roads Critical Risk profile relating to
Interaction with Live Traffic.

Distribution of Notice	Main Roads Personnel and Contracting Organisations
